Vaccine Checker app to put safety at the heart of in-person events

Eventcombo, an innovative event platform for in-person, virtual and hybrid events, has added an important Vaccine Checker feature to its industry leading event management app, putting safety at the heart of in-person events.

- The Vaccine Checker feature is now live on Eventcombo's innovative app for [Android](#) and [iPhones](#).
- The groundbreaking feature assists event organizers to run more efficient events as the landscape of event management switches to a safety first ethos.
- Eventcombo hopes that this feature will help to provide peace of mind to organizers and attendees to support the return of in-person events.

Eventcombo's Vaccine Checker is the latest feature to be introduced to the leading and first of its kind event management Event-as-a-Service (EaaS) cloud-based technology platform, almost guaranteeing the safety of all those who attend in-person events.

In a post-pandemic world, the events industry is under pressure to implement Covid-19 vaccination certification processes as a condition of entry. Eventcombo understood the need to introduce a vaccine checker system to its app in order to make people feel safer about attending events and going back to the complete event experience.

As vaccination numbers have increased, in-person events have become more common. Many event organizers challenged Eventcombo on how they can best protect the health and safety of their attendees, staff and speakers. In response, the organization worked tirelessly to provide a system that proves that any events hosted on Eventcombo puts safety first.

Saroosh Gull, CEO, Eventcombo, says: "Today's events must prioritize health and well being. Now and going forward, health and safety should be paramount. The pandemic has brought forward important changes to the way we interact, and one key takeaway is leveraging digital tools to ensure safety and improve your audience's experience.

"We understood the demand for events to require proof of vaccination for entry and I am delighted we can offer a hassle-free Vaccine Checker for our clients. Creators of live events are going to play a pivotal role in controlling the spread of the virus through adopting safety measures and using tools such as our Vaccine Checker at their events."

Event management is no longer just about dates, cost, and delivery. Event managers now need to consider the health and security risks for their attendees.

Gull added: "Vaccine passports have increased the speed at which we have returned to a normal life and they will increase event activity. Now we've introduced the ability to allow organizers a quick and easy way to enforce their desired health measures, if they choose to enforce vaccination checks."

How does it work?

The Eventcombo app has been specially built to take the strain away from organizers - removing the need for uploading or scanning paper documents before the event, which would hold up entry with long lines.

Attendees will be asked to self-certify using Eventcombo's specially designed Vaccine Checker during the event registration, before simply showing their Vaccine Pass at the door before entry.

Checking will be done via the app and will sync with a real time dashboard to ensure organizers are aware of the vaccine status of their audience.

Despite every city, region or country having their own mandate and authority, the app allows each organizer to be able to validate their audience's vaccine status based on their local jurisdiction and requirements.

Play your part

The Vaccine Checker tool is free to use for all events hosted on Eventcombo and it is live and available via the Eventcombo App. You can download the app from the App Store or Google Play Store.
