

EVENTSCASE

Eventscase achieves ISO/IEC 27001:2013 certification

13 September 2022. This standard applies specifically to the information security management system that supports the development and maintenance of the Eventscase platform.

The event-tech company, Eventscase, achieved ISO/IEC 27001:2013 certification on August 30, 2022. This standard, which is granted by an external auditor, Bureau Veritas, reaffirms Eventscase's commitment to cybersecurity and data protection.

Eventscase has been subjecting its servers and other infrastructures to the most stringent security measures for years. At some point, some of its customers have even implemented penetration tests to challenge the integrity of its systems.

As Jose Bort, CEO & Co-Founder, says: "We follow the highest standards and requirements in managing data that is entrusted to us by clients in their use of our different products".

This internationally-recognised achievement further proves the company's commitment to excellence. In conjunction with the ISO 9001:2015 certification for its quality management system, Eventscase is able to maintain its operations – with full confidence – as an event management software provider.

About Eventscase

The Eventscase platform helps event organisers manage corporate events, conferences, and trade shows, whether large, small, in-person, hybrid, or virtual. No technical skill is required at all. Anyone can create beautiful event websites, registrations, accreditations, perform check-ins, event apps, 1:1 meetings and more. Everything under the brand and domain of your company can be implemented with an Eventscase white-labelled platform. Telefónica, CNBC, BBVA, Santander UK, CaixaBank, Johnson & Johnson, London Business School, United Nations, Ducati, Audi and Cartier are some organisations that have relied on Eventscase technology to manage their events.
